

EasyFeed DUO

For parallel feed lines with two types of feed.

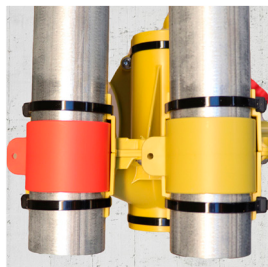

Daltec EasyFeed is available for systems with single or dual feed lines. The difference is the connection to the pipe system.

With the EasyFeed DUO connection, it is possible to connect the EasyFeed feed dispenser to two parallel feed lines. The feed dispenser can thus easily be individually supplied with two feeds via clear, colour-coded dampers. It is also possible to provide them with colour-coded control cords which would ensure even easier operation.

The EasyFeed feed dispenser is easy to operate as the individual feed dispenser can be easily disconnected by moving a red handle on the front of the feed dispenser. When the handle is in the upper position, the feed dispenser is not activated along with the rest. The setting is easily visible to everyone which prevents incorrect operation and allows all animals to receive the intended quantity of feed.

A high-quality product. All metal components are made of stainless steel and EasyFeed is easy to clean which ensures a long service life.

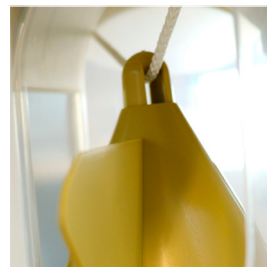

The EasyFeed DUO Y-connection is available for Ø50.8 mm and Ø60 mm pipes.

Colour-coded connections simplifies connecting and controlling the supply from the two pipes correctly.

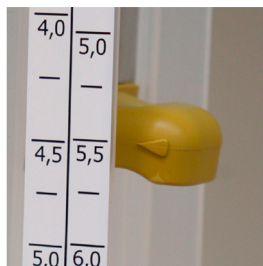

Integrated swivelling dampers can be marked by clearly colour-coded cord controls.

Unique trigger principle.

Large, self-supporting hatch.

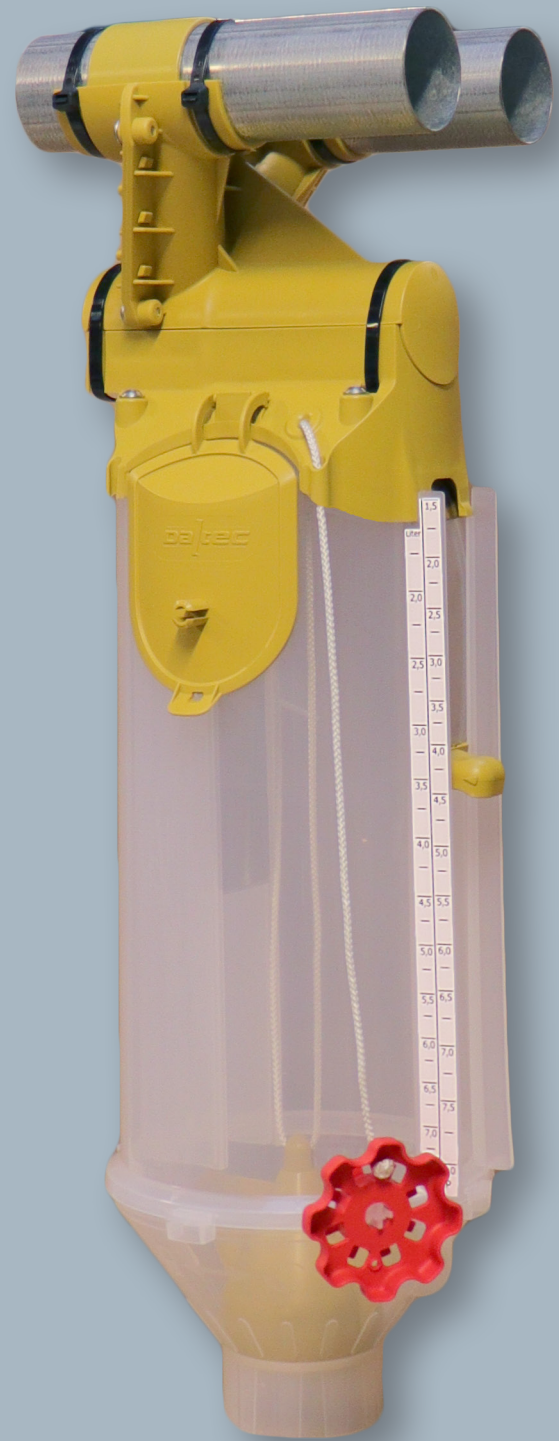

Easy-to-read dosing index.

Easy to install/dismantle. Watertight.

Twice the utility value without additional work
