

# Daltec DSM Mobile

1  
NEW  
FEATURE

**“Stay mobile with Daltec”**

**With Daltec DSM Mobile, you can monitor and correct the feeding via your smartphone, regardless of whether you are in the barn, in the office or outside the farm. It is effective and provides maximum security in everyday life.**

Daltec DSM Mobile is an app that functions as remote access to Daltec's sensor controlled dry feeding system with portion feeding. The app provides an overview of the current status and i.a. possibility to adjust the feed data of the pens, if e.g. the animals' appetite deviates from what was planned. The changes are easily carried out while standing outside at the individual pens.

Alarms for possible malfunctions are clearly displayed. In order for users to best plan the remedy, the alarms are described in text. It is possible to both delete alarms and start the system again.

Older Daltec portioning systems can also be upgraded with DSM Mobile.
